

# Signal Corporate

**Signal Corporate** continually gathers, integrates, and organizes information about vulnerabilities that are relevant to your organization.

Signal reduces the daily burden of identifying relevant vulnerabilities and accelerates your response times.

## Real-Time Vulnerability Intelligence for Enterprises

Cyber security has become a critical business objective for every company. A single high-profile data breach can force any business into a survival situation on the global stage. In order to thrive in today's complex world of threats, a company needs real-time, actionable vulnerability intelligence.

Unfortunately, most companies use manual approaches to collect and process vulnerability information. This can take days or even weeks, quickly translating into increased risks for both the business and its customers.

Signal Corporate solves this problem, giving you the relevant data you need.

- Automatically aggregates vulnerability intelligence from multiple sources
- Simplifies risk scoring and classification, combining data from various sources
- Tracks and ranks only the vulnerabilities that are relevant to an organization
- Uncovers proof-of-concept exploits
- Provides recommended mitigation solutions
- Identifies detection mechanisms for known threats
- Aggregates key security news and reports

# How Signal Corporate Works:

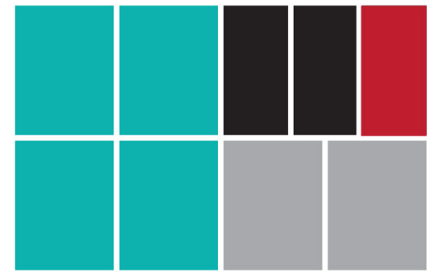

## Step One

Continuously aggregate vulnerability and exploit data from numerous sources

## Step Two

Clean, classify, and enrich data so it is easier to understand

## Step Three

Cluster and relate enriched data, enabling users to prioritize, filter and search

## Always Watching

Behind the scenes, Signal Corporate monitors thousands of vendors and tens of thousands of products for vulnerability information. The system also tracks security issues in hundreds of 3rd party libraries used by organizations worldwide.

Monitoring this vast number of sources is impossible for a human analyst. Signal monitors these sources 24x7.

## Integrated Solution

Corporate customers need a solution that can be integrated with their IT systems. Signal Corporate makes that simple. We support integration with common trouble ticketing solutions, so that vulnerabilities can be handled through your normal IT workflow.

In addition corporate users can be notified of relevant vulnerabilities through email and other notification channels use by your organization.

Contact us to today to find out more about how Signal Corporate can be deployed in your organization for proactive security awareness.

## Key Features

- **Comprehensive coverage** – Cytenna maintains one of the largest vulnerability databases in the industry
- **Real-time coverage** – Signal continually monitors for new and updated vulnerability information
- **Granular Filtering** – User profiles can be used to filter information relevant to your organization.
- **Advance Notification** – Signal alerts teams about new vulnerabilities through push (e-mail, SMS, etc) and pull (API) style techniques
- **Workflow Management** – Enables teams to share, discuss and track vulnerabilities important to your organization
- **Powerful Search** – Allows vulnerabilities to be identified based on vendor specific labels, keywords and industry terms
- **Rest API** – Provides an easy way to integrate Signal's data into your existing monitoring applications
